## Region of attraction with integral quadratic constraints

System Theoretical Methods for Flight Control

*Thursday 7<sup>th</sup> May, 2026*

First Last

① Overview

② TikZ Examples

③ Useful Features

This is the first frame. It's not very exciting, but still, it's the first frame.  
Slides should contain a descriptive text. But not full sentences like these.

- ❶ Some people like overlays in their presentation.
- ❷ i.e., slides that build up step-wise.
- ❸ Note that these overlays do not increase the number of slides on right bottom corner.
- ❹ Some commands include '*pause*', '*uncover*', '*only*', etc.
- ❺ There is no need to copy the information from one slide to the other to create overlays!

- ① Some people like overlays in their presentation.
- ② i.e., slides that build up step-wise.
- ③ Note that these overlays do not increase the number of slides on right bottom corner.
- ④ Some commands include '*pause*', '*uncover*', '*only*', etc.
- ⑤ There is no need to copy the information from one slide to the other to create overlays!

- ④ Some commands include '*pause*', '*uncover*', '*only*', etc.
- ⑤ There is no need to copy the information from one slide to the other to create overlays!

In the next slides, we will see some examples.

## TikZ Example - 3

## TikZ Example - 4

Figure 1: Some description

Well, tikz is AWESOME, however as you probably noticed by now, it can take a lot of time compiling the whole document if it contains multiple tikzpictures.

If possible, generate the tikzpictures in a standalone file, i.e., generate .pdf files with the figures and only import those to the main file. Believe me, it will reduce by a lot the time you spend waiting for the compiled file.

Since this is latex, we can use equations.

$$\dot{\mathbf{x}} = \mathbf{Ax} + \mathbf{Bu} \tag{1}$$

All equations are numbered by the order they appear in the presentation. But if you don't want a numbered equation, you can still do it

$$E = mc^2$$

One useful and nice feature is the block environment (*newtheorem*). It can be used to highlight important information. (see `preamble.tex`)

## Conferences

- ① *American Control Conference, Toronto, July 2024*  
*Initial deadline: **September 22, 2023***
- ② *European Control Conference, Stockholm, June 2024*  
*Initial deadline: **October 25, 2023***

## Theorem (Theorem name)

*This is a theorem.*

## Remark

*This is a remark.*

Figure 2: Caption 1

Figure 3: Caption 2

Note that only some pdf viewer can render the video. For presentations I recommend using '*pdfpc*', an open source presentation viewer that mimics the presentation layout from PowerPoint (some advantages include a timer, a way to see the next slide before it is presented and the use of a pointer or a pen)

Just as a normal .tex document we can use .bib files to cite references.

- Some random text... [? ]
- Another random text... [? ? ]

The references are shown at the end of the presentation automatically.

In the next slide, you have the default final slide. You can edit it as you see fit.  
In the current state you just need to change the photo and a few information details.
